

Nathan J. Mahnke

mahnkejames00@gmail.com | Bonney Lake, WA | P: (253)-370-0851

SUMMARY

I'm Nathan Mahnke, a software engineer with a Bachelor's in Computer Science and Systems from the University of Washington. I've completed the Revature Pre-Training program, where I built a REST API backend using Java, SQL, RESTful APIs, and Javalin. I have one year of experience as a professional Full Stack Developer.

At RMS Corporation, I designed and implemented AI-driven automation and decision-support tools that streamlined warehouse inventory management and significantly reduced manual workload. As a consultant at Northwest Asset Management, I modernized client materials by integrating AI voice, redesigning workflows, and future-proofing forms for seamless database integration.

My technical toolkit includes C#, Java, Python, Spring, SQL, JavaScript, HTML/CSS, and strong expertise in databases, automation pipelines, and AI-powered solutions. I thrive on problem-solving, system optimization, and mentoring teammates. I'm passionate about creating impactful software and continuously growing as an engineer and developer. I'm excited to bring my hands-on skills and innovative mindset to your team.

WORK EXPERIENCE

RMS Corporation

Nov 2023 – Dec 2024

Full Stack Developer

Kent, WA

- ❖ RMS Corporation provides cutting-edge technology solutions and services, focusing on inventory management software for hundreds of warehouses across America.
- ❖ Designed and implemented automation solutions reducing manual workload by using AI predictions.
- ❖ Developed a decision support tool in Excel using VBA to enhance inventory management.
- ❖ Simplified device evaluation processes to enhance onboarding and reduce training time.
- ❖ Mentored team members on proprietary processes and tools for enhanced team proficiency.

Northwest Asset Management

Sept 2023 – Dec 2023

Client Material AI Integration and Redesign Consultant

Remote

- ❖ Northwest Asset Management is a financial services firm specializing in wealth management and client advisory services.
- ❖ Redesigned annual meeting materials to align with corporate style and integrated AI voice for enhanced engagement.
- ❖ Designed fillable PDF forms to replace annual emails, eliminating manual data entry.
- ❖ Future-proofed PDFs for potential database integration.

EDUCATION

University of Washington

June 2023

Bachelor of Computer Science and Systems

Relevant Coursework: Database Systems, Software Engineering, Operating Systems, Algorithms, Artificial Intelligence

Pierce College Puyallup

September 2020

Associate of Arts

Relevant Coursework: Public Speaking, Mechanical Engineering, Statistics

UNIVERSITY PROJECTS

MailGuard (Email Classification Recurrent Neural Network)

Dec 2022

- ❖ Produced code to handle data sanitization and indexing, model creation and training, as well as model testing and improvements, all of which can be found here: <https://colab.research.google.com/drive/1UrVu5VIYgHIzJpsrfWIVL3z2nK-nLt93?usp=sharing>
- ❖ Wrote and designed a Google Site as a formal paper discussing the technical aspects of the model and its evolution.
- ❖ Performed a ten minute oral presentation on the major aspects of MailGuard, such as its viability in the current market

Database GUI (GUI written in C# to interact with SQL Server)

Dec 2022

- ❖ Developed a program to open a connection with a SQL Server instance containing a Server with tables regarding a baseball league
- ❖ Further evolved this program to act as GUI which shows the content of tables and allows for the deletion and insertion of new entries (note that the deletion used cascading deletion which, if made into a product for the market, would need to be changed immediately)
- ❖ All code for this project can be found here: <https://github.com/nathanmahnke/DatabaseGUIMahnke>

Lavaboy and Icegirl (Fireboy and Watergirl remake using JavaScript)

Dec 2022

- ❖ Designed and implemented game mechanics and levels from the classic flash game Fireboy and Watergirl using JavaScript
- ❖ Hosted this remake using Github Pages: <https://philtki.github.io/Lavaboy-and-Icegirl/>
- ❖ Worked as part of a team with a fellow classmate, Phillip, to decompile the original game and reuse assets

Dungeon Adventure (Completely original dungeon adventure game made using Java)

Jan 2022

- ❖ Designed algorithms for room generation using 2D arrays
- ❖ Developed GUI systems to interpret 2D arrays and display corresponding game assets
- ❖ Developed mechanics to allow players to interact with the world
- ❖ Github can be found: https://github.com/Nathan9819/TCSS360_Dungeon_Adventure_Group_Project
- ❖ Worked in collaboration with another student, Colton, who created the combat system

CERTIFICATION, SKILLS & INTERESTS

Certifications: Foundational C# with Microsoft from freeCodeCamp**Skills:** Advanced in SQL, Python, Java, and C/C#/C++; Proficient in HTML/CSS.

Member of the NSLS chapter at UW

Interests: Hiking, weight-lifting, video games, painting, and tabletop games.
